

World-recognized security monitoring and business software

Protecting people and property around the world for over forty years

MAS is the provider of the MASterMind™ suite, one of the world's preeminent security automation software applications. The MASterMind suite provides a fully integrated, enterprise solution for monitored, security service providers and proprietary central stations. For the past 40 plus years, MAS has established a customer list that includes a majority of the largest and most successful organizations in the alarm security industry both in the United States and globally.

MASterMind Monitoring

MASterMind Monitoring is a world-recognized monitoring center software, regarded for its unparalleled alarm processing capabilities and proven system reliability.

MASterMind Business

The MASterMind Business software suite integrates customer data into a single source to improve front-office business efficiency and streamline back-office operations of service-based organizations.

MASweb

Central station personnel and dealers can manage data in real time, perform service and installation job management, and generate reports.

MASmobile

Extend your customer data management capabilities and expand your service offerings to customers using our suite of mobile applications.

Report Server

Extends the capabilities of MASterMind to include report processing work distribution, scheduling and remote printing of reports, faxing, emailing and SMS texting, including the powerful auto notification.

MASvideo

MASterMind easily integrates with the industry's leading video monitoring products and seamlessly integrates video into the dispatching process through MASvideo.

MAStelephony

Integration of full-scale telephony into security software solutions. Phone control screen pops for incoming Caller ID based on customer and site lookups.

MAS VRT & IVX

VRT (Voice Response Terminal) allows access via telephone to MASterMind. Saves operators time by eliminating routine tasks.

IVX (Integrated Voice) allows automated calls to customers, notifying them of alarm conditions such as low battery or failure to close.
