Aspirating Smoke Detection

A CPD guide to understanding Aspirating Smoke Detection Systems in accordance with BSEN54-20.

Duration – 1 hour
Who should attend - Designers, installers and maintainers of fire detection and alarm systems
External Approval - CPD Service

Course details
This CPD is a guide to understanding how Aspirating Smoke Detectors (also known as Air Sampling Smoke detectors) work and what environments are best suited for this type of fire detection. The course also covers what the key considerations should be when designing and installing an aspirating system.

Certificates of completion are awarded to attendees completing the course.
