Raising the Standards

An overview of BS 5839-1:2017, the Code of Practice for fire detection system design and installation in the UK.

Duration – 2 hours
Who should attend - M&E Consultants, End Users, Architects or anyone involved in the process of providing or maintaining an automatic fire detection system
External Approval – CPD Service

Course details

This presentation is an overview of the revised British Standard BS 5839-1:2017, which is the Code of Practice for system design, installation, commissioning and maintenance of fire detection and alarm systems within the UK. It is aimed at advising any professional party involved in providing a system, with advice on what is required in each step of the process, as well as explaining to the end user and their service provider what their ongoing responsibilities are during the life of the system.

The presentation details the tasks and skills required by designers, installers, commissioning engineers, service providers and end users and highlights the certificates they are expected to sign after completion of their work. It also briefly mentions the two Quality Assurance schemes currently available within the industry, which, if followed, will guarantee the system continues to comply with the requirements of the standard.

Certificates of completion are awarded to attendees completing the course.
