

# ROOM FOR SAFETY: ATRIUM HOTEL STRIVES FOR FIRE SAFETY EXCELLENCE

ATRIUM HOTEL CASE STUDY

**Honeywell**  
GENT

## Contemporary Atrium Hotel has put its trust in Amthal Fire and Security to deliver an enhanced fire safety maintenance service, for the safety of staff and guests.

Conveniently located within a five-minute drive from Heathrow Airport, Atrium Hotel serves as a premier urban retreat with 573 elegantly designed contemporary bedrooms. To stay compliant with the latest fire safety regulations, the hotel's site team worked closely with Amthal to develop a comprehensive maintenance programme.

As an approved Honeywell Gent partner, Amthal utilised its Connected Life Safety Services (CLSS) all-in-one cloud platform to maintain the fire systems across the hotel facilities thereby optimising performance while minimising disruption to hotel operations.

Francisco Quintero, Maintenance Manager at The Atrium Hotel Heathrow, says: "The hotel is built on a commitment to exceptional service, ensuring every aspect of a stay is seamlessly taken care of. Whilst its core objective is to offer the latest and contemporary amenities; the safety and security of our hotel experience is critical.

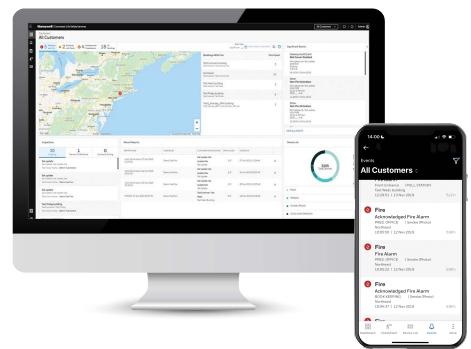

"From an operational efficiency and compliance perspective, we needed to ensure the right approach to maintaining our fire safety systems. Amthal offered advice and practical support on how this could be achieved remotely, with Honeywell CLSS. It enables real-time visibility to enhance timely, accurate decision-making by on-premise and remote staff, a great benefit to us all."

As an approved Honeywell Gent partner, Amthal can present CLSS to maintain all fire systems across the site, alongside testing emergency lighting, emergency voice communications and regular fire door testing. This provides a complete and compliant fire protection service for The Atrium Hotel.

Mark Hunter, Honeywell Gent Business Manager added: "Fire safety is one of the biggest challenges presented in any hotel environment. The need to balance an ongoing welcoming and relaxing environment that doesn't compromise on the safety of guests.

"What Amthal demonstrates at The Atrium Hotel is the importance of not just installing the right specification of systems but also maintaining them to maximise performance. This can be achieved with CLSS remotely to ensure less disruption and time on site from testing, with push notification of events to mobile devices to alert staff of any specific findings. It all comes together to achieve undisputable compliance from the hotel perspective."

David Williamson, Amthal Sales Manager concludes: "We are proud to partner with The Atrium Hotel to ensure their fire safety systems are not only up to date but also maintained to the highest standard.

"By leveraging the capabilities of Honeywell CLSS, we can provide a seamless and efficient maintenance service that aligns with the hotel's commitment to safety and excellence. With total protection and guaranteed compliance, staff can be assured of fire safety maintenance measures in place. And they can focus on serving guests, allowing them to enjoy all the facilities and services available."

**THE ATRIUM HOTEL UTILISES HONEYWELL CLSS TO OPTIMISE PERFORMANCE AND MINIMISE DISRUPTIONS**
