Onity

Onity Serene™ Luxury Lock

Beautifully designed, inside & out

Onity Serene is a sleek all-in-one lock designed both inside and out for luxury hotels. Its small glowing halo of light symbolizes both timeless design and leading-edge DirectKey mobile access technology that allows guests to unlock their room with ease as they approach the door. And, with a range of lever styles and finishes, Onity Serene can be customized to fit the look of any property. This is a lock both technology specialists and designers can easily and securely, totally love.

DirectKey™ mobile access technology

DirectKey provides a seamless journey, allowing guests to skip the front desk and securely download their assigned key to access their room and other guest-accessed areas of the property. *

Onity Serene locks use Bluetooth® technology to stay in a ready state so guests can use a hotel- provided mobile app to unlock as they approach the door. With built-in DirectKey mobile access technology, they enable properties to easily implement a proven mobile key solution right away, or when they are ready.

Advanced security

Onity's DirectKey system protects mobile key credentials using 128-bit AES encryption which provides an additional layer of security on top of locking system features built into Onity Serene locks such user access permissions and audit trails.

Onity Serene is available in EURO, ANSI standard and ANSI latch-only configurations.

Simplified lock management

Onity's OnPortal™ lock management software is designed to deliver optimal efficiency, flexibility, and guest satisfaction. OnPortal software manages Onity locks and access control devices for properties, allowing staff to create and manage both mobile and physical key credentials.

As a Windows® based system, it can be used side-by-side with a PMS system on a desktop PC or on a tablet so you can greet guests away from the desk.

Future proof for advanced technology

Onity's DirectKey mobile toolkit offers a convenient way to manage locks through contactless communication between a smartphone and Onity Serene locks via Bluetooth technology. Qualified hotel technicians can use the toolkit to install, manage, or troubleshoot the locks. As Onity access management systems evolve, Onity Serene lock firmware can be upgraded through a firmware utility to optimize lock performance and add new features.

Finally, this is a lock both form and function can love.

* Implementation requirements vary and may include integration with a hotel loyalty app, property management system and Onity OnPortal access management software.
