

KEY WAYS INTEGRATING SYSTEMS CAN OPTIMIZE BUILDING OPERATIONS

Honeywell Enterprise Buildings Manager

Honeywell

Honeywell Enterprise Buildings Integrator (EBI) integrates your building's critical systems into one powerful user experience.

By leveraging data and insights across systems and then unifying control into an intuitive map of your facility, EBI can help you dramatically improve the performance and value of your building operations.

INTEGRATE **SYSTEMS INTO A SINGLE VIEW**

EBI consolidates all of your essential building systems – such as HVAC, fire and life safety, intrusion, access control, video surveillance, and energy management – into one unified platform.

This eliminates the need to switch between disparate systems, offering a comprehensive overview of your entire facility through an interactive map that is highly zoomable and intuitive. This single point of control simplifies monitoring and operation, enabling clearer and more accurate decision making to optimize building performance in real time, and over time.

OPTIMIZE **EFFICIENCY AND** **RESPONSIVENESS**

By integrating building operations, EBI helps optimize both efficiency and how quickly your team can respond to events. Real-time data and automated workflows help ensure the right personnel are alerted promptly, and predefined procedures can be triggered automatically. This allows for streamlined operations, reduced energy consumption, and lower energy costs.

MAINTAIN **SAFETY AND SECURITY**

EBI can help you improve the safety of your building and the people inside it by providing immediate insights into status from fire and life safety systems. The intelligent alert system proactively identifies concerns to support timely intervention and risk mitigation.

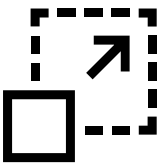

Integrated security capabilities such as video monitoring and access control also help create a safer environment for people and property.

IMPROVE COMFORT AND WELL-BEING

EBI enables smart automation for building systems like HVAC and lighting, helping you create indoor environments that improve occupant comfort, while also optimizing energy use to fit needs based on occupancy and scheduling.

INCREASE SCALABILITY AND FLEXIBILITY

EBI is an open and scalable solution designed to work with a wide range of third-party equipment and software. This allows you to integrate existing systems and expand the platform as your building's needs evolve, protecting your investment and enabling future adaptability.

Honeywell Enterprise Buildings Integrator actively monitors more than 11 million data points in nearly 1,600 systems around the world, helping complex facilities use insights across their systems to optimize outcomes for life safety and security, energy management, and operational efficiency.
