CONNECT YOUR GUESTS TO THE FUTURE OF HOSPITALITY

Give guests experiences that bring them back, while streamlining energy use, access control and operations – with Honeywell building automation for hospitality

CONNECTED CAPABILITIES
FOR HOSPITALITY

Honeywell

AUTOMATE OUTCOMES
THAT BUILD YOUR BRAND

Our commitment to hospitality is built on these pillars: To help your hotel find the optimal balance of safe and delightful guest experiences, smart operations and access control, and energy management that supports sustainability – whether you operate a single property or a global portfolio.

By pairing industry-leading guestroom and building automation with innovative capabilities designed for hospitality, we're committed to helping you achieve outcomes that build your brand.

ENHANCE GUEST EXPERIENCES

Provide seamless, guest-centered experiences that build loyalty and the bottom line by bringing comfort to guests throughout the property.

Responsive capabilities such as lighting, drapery and HVAC systems give guests customizable comfort with controls that remain out of sight and out of mind when unneeded.

Help make guest stays more than a home away from home by integrating a blend of personalized services and smart-room capabilities with data and automation to keep it running smoothly.

IMPROVE SAFETY AND SECURITY

Minimize risks to your guests and property from behind the scenes with embedded security and fire detection capabilities.

To prevent intruders and lock down unwanted access, equip doors with smart locks and mobile room keys. If a safety incident occurs, stay updated on guests, staff and your building's condition with a network of sensors and alerts delivering real-time information.

Help guests enjoy their stay and feel at ease without noticing security maintenance or false alarms.
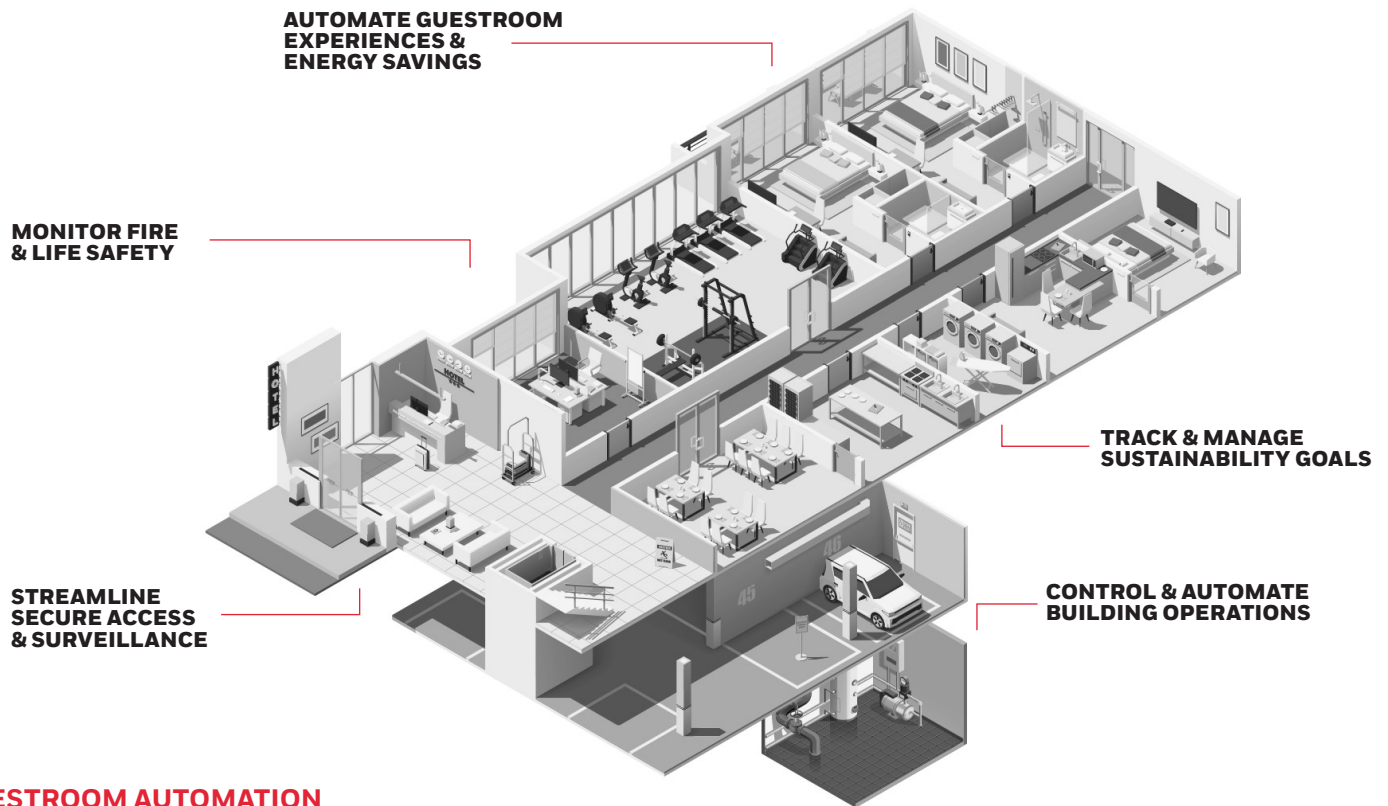

OPTIMIZE ENERGY USAGE

Lighting and HVAC controls can automatically adjust to room occupancy and time of day and reset to customized settings when a guest returns. Integrated building management systems that monitor air quality with sensors that calibrate ventilation and filtration systems based on need.

STREAMLINE OPERATIONAL EFFICIENCY

Automation of building management and labor can increase staff productivity and enhance guest services. For example, monitoring occupancy can help housekeeping work efficiently without disturbing guests in their room, while property sensors can identify maintenance issues to fix before leading to complaints.

EVERY BUILDING SYSTEM CONNECTS WITH HONEYWELL

AUTOMATE GUESTROOM EXPERIENCES & ENERGY SAVINGS

MONITOR FIRE & LIFE SAFETY

TRACK & MANAGE SUSTAINABILITY GOALS

STREAMLINE SECURE ACCESS & SURVEILLANCE

CONTROL & AUTOMATE BUILDING OPERATIONS

GUESTROOM AUTOMATION

From energy management to security, Honeywell capabilities provide guestroom management systems that have earned reputations for reliability and efficiency while keeping guests comfortable.

Our INNCOM Energy Management System is easy to expand so you can scale up as needed:

- **Standalone EMS:**
  INNCOM EMS thermostats with built-in motion sensors provide occupant detection for energy efficiency that doesn't compromise comfort

- **Advanced EMS:**
  Door sensors add faster, more precise occupant detection

- **Networked EMS:**
  PMS integration fully optimizes guestroom energy use

- **Guestroom IoT:**
  Integrate the widest selection of third-party hotel technologies — door locks, lighting, drapes and shades, voice control, minibars and more

To provide connected security throughout your hotel, Onity access control makes it easier for guests to enter their rooms with electronic door locks and mobile keycards. For staff, Onity provides live front desk alerts to monitor threats as well as remote maintenance.

BUILDING CONTROL & AUTOMATION

Whether you need a building management system (BMS) preconfigured for easy training or one that's fully customizable, we offer the full spectrum of capabilities — and our experts can help you identify the most cost-effective options for your goals.

- Remote management makes it easy to operate, analyze and benchmark any number of properties

- Unify building systems such as HVAC, fire safety, security video and access control into an interactive map of your site

- Use real-time sensing and automation to optimize energy use, comfort and other system-performance metrics throughout the property

- Predictive maintenance identifies issues before failures occur to improve building performance, extend asset longevity and reduce downtime and maintenance costs

LIFE SAFETY

For decades, we've helped buildings of every size and complexity get the capabilities they need to protect people, property and operations.

- Simplify fire and life safety with cloud-based digital integration for remote alerts and management, and faster maintenance and testing

- Detect fire, smoke and other hazards earlier

- Improve emergency responses and communications

- Optimize security and video monitoring with AI-based analytics

- Streamline secure access with easy customization for multiple roles

- Reinforce cybersecurity for your building's operational technologies (OT)
